

Dataproces signed 5 new software agreements in July

Dataproces today released its monthly sales update for July, in which the company signed 5 new software agreements and 2 Data Analytics agreements.

Earlier this year, Dataproces switched to monthly sales updates, and has now published its update for July 2026. The company signed two agreements on MARS, one agreement on KØS, and two agreements on the new platform KommuneProfil. In addition, two agreements were signed on Data Analytics. These new agreements cover Denmark only, where the market has been affected by the summer holiday period for a large part of the timeframe.

In the 2025/26 financial year, the average annual contract value for software agreements was DKK 54,765, while agreements on Data Analytics averaged DKK 254,433. The average contract values are based on historical data and therefore cannot be used as a precise estimate of the value of future agreements.

Over the past three months, from May through July, Dataproces has signed a total of 16 new software solution agreements in Denmark, along with 9 new Data Analytics agreements.

Earlier this month, Dataproces also won its first German advisory assignment through its partnership with Lexis & Rother. This was quickly followed by a second agreement with a German municipality, likewise secured through the collaboration with Lexis & Rother.
