
ContextVision announces changes to its management team and strengthens its technology leadership with appointment of new CTO

Stockholm, Sweden – 2 March 2026 – ContextVision, a global leader in medical imaging software, today announces changes to its management team as part of the company’s continued transition toward quantitative imaging solutions.

ContextVision is pleased to announce the appointment of Marco Marien Voormolen as Chief Technology Officer (CTO) and a new member of the management team. Marco brings extensive experience working with ultrasound OEMs and has successfully led R&D projects within acoustics and novel imaging applications. His appointment supports the execution of ContextVision’s technology roadmap, strengthens capabilities across the image chain, and further enhances collaboration with key OEM partners, as well as the research community.

“We are very pleased to welcome Marco to ContextVision. His deep technical expertise and strong track record of innovating together with customers and suppliers in advanced imaging technologies and artificial Intelligence will be crucial as we expand our portfolio beyond image enhancement. Marco is also well recognized in the global research community, and I am confident that in his new role he will deliver scalable, groundbreaking innovation to the market,” says Gerald Pöttsch, CEO of ContextVision.

The new management team will consist of the CEO, CFO, CTO and the Chief Product and Services Officer (CPSO).

“These changes to the management team ensure a strong customer focus throughout the organization while we further strengthen our long-term value creation,” says Gerald Pöttsch.
