Trelleborg's climate targets validated by Science Based Targets initiative

Trelleborg's new climate targets have been validated by the Science Based Targets initiative (SBTi). Efforts moving forward to reduce the Group's climate impact are therefore aligned with the Paris Agreement's goal to limit global warming to 1.5°C.

"We are proud that our climate targets have been validated by SBTi. It is an important milestone that illustrates our ambition to be a sustainability leader in our industry. Our Excellence programs provide us with clear processes and plans to increase the pace of our transition," says Peter Nilsson, President and CEO of Trelleborg.

Under the new validated climate targets, Trelleborg is committed to halving direct and indirect CO2 emissions (Scope 1 and Scope 2) by 2030 compared with the base year 2021, and, during the same period, reducing emissions along the value chain (Scope 3) by 25 percent.

Trelleborg's previous target of a 50-percent reduction in direct and indirect carbon emissions relative to sales by 2025, with 2020 as the base year, was achieved already in 2023.
