

QleanAir Scandinavia K.K. Japan signs a large order for high-performance air cleaners with a fruit and vegetable distribution and processing company

QleanAir Scandinavia K.K. Japan ("QleanAir") has entered in a partnership with a domestic fruit and vegetable distribution and processing company in Saitama Prefecture and will install a total of nine air cleaning units, including the QleanAir FS 70, a high-performance industrial air cleaner. QleanAir FS 70 uses powerful push-pull suction and exhaust technology to collect fine dust particles and clean indoor air in factories and warehouses, and has been installed mainly in Europe.

- "QleanAir FS 70 is being used to protect both the fruit/vegetables and employees from mold and dust. We are convinced that we have made it possible to create a compact and efficient ventilation environment with this mobile system which requires no construction work", says Takuya Ichimura, Account Sales Manager, Qlean Air Scandinavia K.K. Japan.

The installation is scheduled for October, with an order value of 90,000 EUR. This air cleaning solution uses a multi-layered filter structure and is supported by regular maintenance through QleanAir staff to ensure long-term performance.

- "We are very pleased to be able to contribute to building a better air environment through this partnership. We will continue to deliver our technology and our passion for the environment as a solution to as many people as possible", says Glen Shimizu, President of QleanAir Scandinavia K.K. Japan.
