

CORRECTION: MAR removed. Freemelt strengthens the management team and appoints Karin Stenback as CTO

Karin Stenback has been appointed as CTO (Chief Technology Officer) and will be part of Freemelt's executive management team. Karin currently serves as R&D Director at Breas Medical AB and has extensive experience in senior leadership positions within global industrial companies, particularly in the medical technology and automotive industries.

"With over 20 years of experience in global industrial companies, I'm looking forward to joining Freemelt and being a part of the next phase in accelerating the industrialization of the company and its products. My experience in leading teams and projects across multiple markets aligns well with the current position of Freemelt," says Karin Stenback.

"Karin brings international experience in product development, commercialization, and leadership within highly regulated industries, similar to the industries Freemelt serves. This is a strategically important recruitment further strengthening our team as we advance to the next level of industrialization," says Daniel Gidlund CEO Freemelt.

Karin will assume the role no later than June 17, 2025.

About Us

Freemelt develops advanced 3D printers for metal components and aims to become the leading supplier in additive manufacturing (AM) using E-PBF technology, targeting SEK 1 billion in revenue by 2030. The solutions primarily support companies in the defense, energy, and medical technology sectors in Europe and the USA, enabling them to drive innovation and improve production efficiency. Founded in 2017, Freemelt has expanded its product portfolio to include three printer models, with two designed for industrial production and one (Freemelt ONE) targeting research institutes and universities. The modular industrial printers (eMELT) leverage E-PBF technology, delivering significantly higher efficiency compared to other machines on the market while maintaining flexibility in metal selection.

Freemelt generates revenue primarily through the sale of advanced 3D printers at fixed prices, complemented by support and maintenance services, which are expected to account for 25% of total revenue by 2030.

The company is now focused on further industrializing its product and service portfolio and driving commercialization in the European and North American markets. Read more at www.freemelt.com
