

# Dataproces Secures New Contracts After a Busy March

## **Dataproces has this week announced two new contracts for its SaaS solution MARS VAT and Data Analytics.**

Dataproces experienced a busy March, during which 11 new contracts were announced compared to 3 new contracts in February. This highlights continued strong sales momentum for the North Jutland-based company. This week, Dataproces has announced two new contracts—both with a municipality in Zealand.

The first contract concerns the use of the SaaS solution MARS VAT. The MARS solution is the company's SaaS platform designed to digitally support, among other things, municipalities' administration of inter-municipal payments and reimbursements. The solution consolidates data from various municipal professional systems into a single platform, providing a complete overview of who needs to pay what—and when.

Subsequently, Dataproces has announced a contract for Data Analytics, which is tailored to municipalities' need to ensure a solid and accurate data foundation. The analyses combine data from relevant professional systems, financial systems, and other data sources to create a comprehensive and quality-assured overview. These agreements are only disclosed when the expected fee exceeds DKK 250,000.

Dataproces operates with a staggered financial year and published its third-quarter report for the 2025/26 financial year in March. The quarter was the best in the company's history, measured by both revenue and earnings, and the annual report is expected to be published on 18 June 2026.
