## Enea Strengthens Cybersecurity Leadership through Extended Partnership with Global Open-Source Security Foundation (OISF)

**Enea, a global provider of telecom and cybersecurity software, has extended its Gold-level partnership with the Open Information Security Foundation (OISF). OISF is the non-profit organization behind Suricata, the world's leading open source engine for network threat detection and security.**

This continued commitment underlines Enea's strategic ambition to shape the future of intelligent cybersecurity solutions while enabling enterprises, governments, and service providers to protect critical infrastructure and digital assets against rapidly evolving cyber threats.

Through the partnership, Enea contributes both funding and deep technical expertise, ensuring Suricata remains freely available to organizations worldwide and continues to innovate as a trusted backbone of network defense. This signals Enea's strategic role at the center of global open-source security ecosystems, reinforcing our commitment to combating evolving cyber threats while strengthening visibility, credibility, and long-term growth prospects.

Building on this collaboration, Enea has developed the Qosmos Threat Detection SDK, which combines Suricata's proven security capabilities with Enea's market-leading deep packet inspection traffic intelligence. This unique software component transforms open-source innovation into a commercial-grade solution, enabling cybersecurity vendors to embed world-class threat detection into their platforms - faster, more efficiently, and ready for real network environments. For customers, this translates into faster time to market, stronger security, and lower development costs.

"Our continued partnership with OISF not only benefits the Suricata community, it also enhances the value we deliver to customers and shareholders," states Osvaldo Aldao, Chief Technology and Product Officer at Enea. "By combining Suricata with Enea's traffic intelligence in our Enea Qosmos Threat Detection SDK, we're enabling the next generation of AI-based Network Threat Detection solutions - solutions that protect networks, strengthen national security, and drive sustainable growth."

Kelley Misata, President of OISF, adds: "We are proud to have Enea as a visible and active member of the OISF community. Open source is not just about making code publicly available; it is about building transparent, trusted partnerships that fuel innovation and resilience. Enea's support is a commitment to, and investment in, the future of Suricata and the broader open source security ecosystem. Their willingness to stand alongside us, not behind the scenes, is what makes this collaboration so powerful. The engagement with Enea's leadership, engineering, and product teams has been incredibly rewarding, and we are excited about what we can continue to build together."

**About Enea**

Enea is a global specialist in advanced telecom and cybersecurity software, with a vision to make the world's communications safer and more efficient. Dedicated to innovation and security, our solutions connect, optimize, and protect communications between people, companies, and connected things worldwide. We serve 160+ communication service providers across 100+ countries, with more than 3 billion people relying on Enea technologies every day. Headquartered in Stockholm, Sweden, Enea is publicly listed on NASDAQ Stockholm. To learn more, visit [enea.com](http://enea.com).

**About the OISF and the OISF Consortium**

OISF is a U.S. 501(c)3 non-profit organization led by world-class security experts, programmers, and others dedicated to open source security technologies. OISF's commitment to open source security technologies and the communities that keep them flourishing is unwavering. OISF Consortium members provide funding that enables OISF to support Suricata's innovation, expert development, and community with infrastructure, expert guidance, and strategic initiatives to keep Suricata open source and thriving. This support also helps enterprise, government, and other global organizations build solutions with Suricata and advance new strategies against evolving cyber threats.
