

Mycronic receives first order for a Precision 8000 Evo

Mycronic AB (publ) has received the first order for a Precision 8000 Evo from an existing customer, for delivery to Asia. The order replaces a previously received order for a Precision 8 Evo, planned for delivery in the second quarter of 2025. The order value is in the range of USD 45-48 million and the net order value amounts to USD 32-35 million. Delivery of the system is planned for the first quarter of 2026.

The Precision 8000 Evo was launched in April 2024 and is Mycronic's most advanced mask writer for displays. It improves the resolution and critical image quality specifications, compared to its predecessor, the Precision 800 Evo, while maintaining writing speed.

"It is gratifying to receive the first order for a Precision 8000 Evo already nine months after we launched our most advanced mask writer, confirming the market demand for high quality photomasks for the most advanced displays. The customer, who previously placed an order for a Precision 8 Evo with delivery in the second quarter of 2025, has chosen to replace it with a Precision 8000 Evo with a later delivery date, in order to meet this growing demand", says Charlott Samuelsson, Sr VP Pattern Generators at Mycronic.

Mycronic's Pattern Generators division provides mask writers and metrology systems for display manufacturing and production of semiconductors.
