JONDETECH SIGNS DESIGN WIN AGREEMENT WITH GLOBAL PLAYER IN SMART HEALTH RINGS

JonDeTech Sensors AB (publ) (“JonDeTech” or the “Company”) has signed the Company’s third Design Win, this time with a global technology company specializing in smart health rings. The agreement covers the evaluation of JonDeTech’s J30 and J30D sensors for potential integration into the customer’s next generation of health rings.

The collaboration includes an initial testing period of approximately six months for technical evaluation, integration and validation of the J30 and J30D sensors in the customer's new project. The shared objective is to lay the groundwork for future commercial deliveries of JonDeTech's sensors. Any future production volumes, prices and delivery terms will be agreed upon separately. The agreement does not entail any binding commitments regarding future commercial deliveries.

"Signing another Design Win is a clear confirmation of the commercial interest in our sensor technology. The fact that an international player in smart health rings has chosen to evaluate both J30 and J30D demonstrates the potential of our sensor solutions in the next generation of wearable health products. We are now continuing our focused efforts to convert our growing customer pipeline into Design Wins, commercial agreements and future volume deliveries," comments Jonas Wærn, CEO of JonDeTech.

The collaboration strengthens JonDeTech's position in the wearable health technology market, where the measurement of Core Body Temperature (CBT) represents an interesting opportunity for the development of new health features. Smart health rings are one of the Company's prioritized segments within digital health, where small, energy-efficient and cost-effective sensors are particularly important.

Design Wins are important steps in JonDeTech's commercialization strategy towards larger-scale commercial deliveries of sensors. At the customer's request, the customer's identity will not be disclosed.

About JonDeTech
JonDeTech is a Swedish high-tech company developing digital and analogue heat sensors for measuring Core Body Temperature (CBT). The Company’s patented sensor technology combines a very small form factor with high accuracy and low power consumption, enabling integration into high-volume products such as wearables, medical sensors and other consumer products. The technology is designed to enable continuous body temperature monitoring in mass-produced

consumer products, representing the next major technological step in digital health and wearables as body temperature data becomes as established as heart rate monitoring. JonDeTech operates through a global network of distributors and partners, with the objective of supplying sensors to leading global players in consumer electronics and digital health.

JonDeTech's share is listed on NGM Growth Market.
