

engcon proudly announce the compatibility of engcon's next generation of control system, DC3, with Cat® wheeled excavator

engcon, the world's leading manufacturer of tiltrotators, is, starting February 2026, expanding the global tiltrotator market with the addition of a seamless installation on Caterpillar Next Gen (NG) wheeled excavators.

In addition to the crawler excavators, the Caterpillar M314 NG–M322 NG models support rapid installation of engcon tiltrotators. This is made possible by engcon's DC3 control system combined with Cat's Software Enabled Attachment (SEA) technology. DC3 is the next-generation control system for engcon tiltrotators, built on a completely new hardware and software platform. It simplifies installation with machine manufacturer interfaces compared to traditional aftermarket solutions.

"With increased demand for our products on a global scale, we see it as crucial to make our tiltrotator more accessible and easier to get in the hands of the customer. It is equally as important to make sure that the customer can get the full value out of what both tiltrotator and machine has to offer, this will definitely easy the entrance into the tiltrotators in all markets", says Sam Ryan, Global OEM Manager, engcon.

This release again reflects a wider industry trend; OEMs are increasingly enabling easier availability of advanced attachments. Solutions like this play a critical role in increasing market penetration and unlocking new levels of machine utilization and efficiency. The ability to utilize all included functionalities makes digging much more efficient and save time for the excavator operator.

For more information about the new release, please reach out to your local engcon dealer or to the Cat dealer.
