

## Ekobot Ab finalist in Techarenan Challenge 2021

**Ekobot has today been named a finalist, and is thus named one of the Nordic region's 50 leading future companies in the Techarenan Challenge 2021 competition. Companies from all over the Nordic region have applied for the competition and the finalists are active in a number of different industries such as cleantech, mobility, e- health, edtech, spacetech, foodtech, and more.**

The Techarena Challenge is being arranged for the eighth year in a row. The entrepreneurship competition is aimed at Swedish and Nordic companies in the startup and growth phase that are based on a unique innovation or business idea with the potential to be commercialized in the global market.

*- This year's final field is one of the most interesting in the competition's history in terms of the major global challenges the companies address and the values they create. It is also impressive to see how many companies have managed to enter the market and attract large customers in a short time. It is obvious that Sweden and the Nordic countries are a breeding ground for exceptional entrepreneurs and companies. Many of the companies have already gained a foothold internationally and created a strong position for further expansion - says Omid Ekhlasi, founder and competition manager Techarenan.*

The final days 2021 take place in Stockholm on 16 June and in November. During the final days, the companies pitch on site for this year's jury, and panels and news broadcasts are arranged on the subject of innovation, entrepreneurship, sustainability and the future. The final will be streamed live on Techarenan.se

The list of the Nordic region's 50 leading future companies is published at [www.techarenan.se/challenge](http://www.techarenan.se/challenge)

### **Techarenan:**

The tech arena was founded in 2014 with the goal of raising entrepreneurship and innovation and inspiring more people to want to be involved and contribute to the growth of new companies with global potential. Today, the tech arena is a platform and arena for entrepreneurs, industry, investors, politicians and opinion leaders to meet, create collaborations, do business and build networks. The ambition is to continue building the platform with a focus on creating value for Nordic startup and growth companies that change, improve and develop their respective industries on a global level.

## About Ekobot

Ekobot is the result of the founder Ulf Nordbeck's thoughts and desire to combine robotics and healthy sustainable food production. Ekobot's goal is to be able to offer practical and sustainable solutions to agricultural issues while reducing workload with autonomous tools for vegetable farmers. Ekobot has grown and combined today a team of experts in agricultural robotics with shareholders who share their convictions and understand the challenges of start-ups.
