

# Quickbit expands cryptocurrency offering to include Ethereum

Quickbit App, which previously supports the use of Bitcoin, Litecoin and Bitcoin Cash, now also supports the cryptocurrency Ethereum.

Ethereum was launched in 2015 and has since grown into the second largest cryptocurrency in the world with a market value of USD 520 billion\*. Offering Ethereum to users is an obvious and important step in Quickbit's efforts to simplify the use of cryptocurrency.

Today's release means that users through Quickbit App can now buy, sell and exchange Ethereum as well. Users can also both send and receive Ethereum to and from external cryptocurrencies.

"Our users have long demanded additional currencies, and specifically Ethereum, which makes this release extra important for us. We now offer more choices for the user and thus a more attractive product that is aimed at a wider target group. We will continue to listen to our users and deliver requested products and functionalities", says Hammad Abuseifan.
