Quickbit expands crypto currency offering to include Cardano, Polkadot and Chainlink

Quickbit App, which previously supports the use of Bitcoin, Litecoin, Bitcoin Cash and Ethereum, now also supports the cryptocurrencies Cardano, Polkadot and Chainlink.

Cardano and Chainlink have been around since 2017, while Polkadot was launched in 2020. All three are among the largest cryptocurrencies in the world based on market value*. Expanding the offer of cryptocurrencies by three more is an important step in Quickbit's efforts to simplify the use of cryptocurrencies in people's everyday lives.

Today's release means that users through Quickbit App can now buy, sell and exchange Cardano, Polkadot and Chainlink. Users will currently not be able to send and receive the three cryptocurrencies to and from external crypto wallets.

"I am pleased that we continue to expand our offering, while still being close to the market and listening to our users when it comes to new products and functionalities. The new cryptocurrencies strengthen our offering as well as our belief that Quickbit App is the market leading crypto platform in Sweden", says Hammad Abuiseifan, CEO Quickbit.
