

## Quickbit launches Web App and Chrome extension – preparations for larger expansion

**Today, Quickbit announces the launch of Quickbit App as a Web App and Chrome extension ("Add-On"). This means that Quickbit App's payment function becomes available in the browser and through a Chrome extension, which enables logging into a Quickbit account directly in the browser.**

The development of a Web App and Chrome extension is an important step in Quickbit's continued journey. This means an expansion of the existing ecosystem of products and services, while also preparing Quickbit for a larger expansion of its user base. Currently, Quickbit is preparing to take the step into completely new markets, and this is part of getting an increased reach and faster spread.

The Quickbit Web App enables users of the Quickbit App to log into their account directly in the browser and perform most of the services possible in the app. Total functional parity between the client apps and the Web App has a longer road map, but is still a goal.

Through Quickbit's new Chrome extension, Quickbit enables its users to have the Web App integrated and available in the browser for internet purchases directly at the time of purchase. It increases the conditions for a wider use of Quickbit's payment services, while at the same time simplifying the payment experience for Quickbit's users. In addition to that, Quickbit gains greater exposure by being visible in the Chrome Web Store and becomes more accessible, enabling more downloads and simplifying the onboarding of new users.

Quickbit also intends to build support for an Ethereum wallet that will provide access to Web3 technologies such as DeFi and NFT. Together with the new platforms, Quickbit strengthens the offering towards the crypto segment and expands accessibility towards an even wider market.

"I am incredibly happy that we finally have a Web App and Chrome extension in place. It is an important step to be able to onboard users to Quickbit and be available wherever our users want to use their crypto. We now hope to have an even faster spread and I am convinced that this is only the beginning of a large and rapid expansion of our consumer offer to the outside world", says Daniel Sonesson, CEO Quickbit.
