## **AVTECHs ClearPath service draws media attention**

AVTECH recently gained attention in both Swedish and foreign media in connection with "Met Office Industry Week" together with project partners Met Office and Norwegian Airlines. Focusing on the use of high-resolution weather forecasts, AVTECH's latest product ClearPath was presented and how it already today helps airlines fly more efficient resulting in a directly reduced environmental impact.

With Norwegian as the launch customer, AVTECH presented how ClearPath benefits from new high-resolution weather forecasts from the Met Office and how ClearPath enables a fuel saving of 1.6% at cruise altitude. The live webinar was well attended by audiences from airlines, air traffic control, journalists, and other stakeholders in the aviation industry. The great commitment from the audience during the subsequent panel debate was also gratifying.

"We are once again seeing evidence of increasing interest in services that contribute to a more sustainable recovery of the aviation industry and where AVTECH's services are fully in line with this development. The product portfolio developed by AVTECH in recent years is based exclusively on existing equipment in the aircraft, which means that all our services are easy to deploy for airlines and quickly produce results in terms of reduced fuel consumption and reduced environmental impact for each individual flight", says Niklaes Persson, Director of Marketing at AVTECH.

AVTECH is now continuing to deploy the service for more airlines that have queued up to test ClearPath in their operation.
