

Enersense enters into an agreement on building optical fibre networks for GlobalConnect in the Helsinki metropolitan area

Enersense International Plc
Investor news, 23 May 2024 at 2:45 p.m.

Enersense, a provider of zero-emission energy solutions, and GlobalConnect, one of the leading providers of digital infrastructures and telecommunications services in the Nordic countries, have entered into an agreement on building optical fibre networks in the Helsinki metropolitan area. The agreement will be recognised in the order backlog of Enersense's Connectivity business area for the second quarter of 2024.

Enersense's agreement covers the design of routes for the optical fibre networks, licensing, as well as earth-moving, telecom and project management stages following the turnkey principle.

"I'm thrilled about this project. The addition of new fiber network routes predominantly caters to the significant demand for establishing data centers. Additionally, it will also serve Finnish private households and enhance capacity and redundancy for municipalities and businesses striving to continue their rapid digitalization efforts", says Helena Bergstrand, Head of B2C Finland, GlobalConnect OY.

"I am very happy that GlobalConnect selected Enersense as its partner to build optical fibre networks in the Helsinki metropolitan area, allowing us to start cooperation with them. Enersense has a proven track record of construction projects for optical fibre networks, and we would like to thank GlobalConnect for its trust in our expertise," says Miika Erola, Vice President in the Connectivity business area.
