

Enersense is responsible for the maintenance of Helen's solar power plants

Enersense International Plc
Press release 17 November 2023 at 12:20 p.m.

Enersense, a provider of zero-emission energy solutions, has started its work as a maintenance partner for solar power plants owned and managed by the energy company Helen. Earlier this autumn, the partners entered into an agreement covering maintenance services for Helen's solar power plants throughout Finland. The open-ended agreement ensures safe operation and uninterrupted production at solar power plants.

For Enersense, the new agreement is a strategically important addition to its long-term cooperation with Helen. It further expands the comprehensive range of maintenance services provided by the Transmission Networks business for various systems of the electricity network and the growing renewable energy production sector. The Transmission Networks business is part of the Power business area.

"Our cooperation with Helen runs smoothly, and we greatly appreciate their trust in our solar power plant maintenance services," says Heikki Roivainen, Portfolio Manager, Transmission Networks at Enersense.
