

Enersense selected as the main contractor for the construction of the Korpilevonmäki wind farm infrastructure

Enersense International Plc
Investor news, 29 November 2023 at 1:00 p.m.

Enersense, a provider of zero-emission energy solutions, has entered into an agreement with Ilmatar Energy on the construction of the Korpilevonmäki wind farm in Säskylä. The order will be recognised in the order book of Enersense's Power segment for the fourth quarter of 2023.

Ilmatar's Korpilevonmäki wind farm consists of six turbines. The construction project started in November, and the contract is expected to be completed in autumn 2024. Enersense's delivery includes the construction of roads and lifting areas in the farm, turbine foundations and the internal network as a turnkey delivery.

"This is our first construction project for Ilmatar in our history of wind power construction, and we are of course very happy of our selection as the main contractor for the Korpilevonmäki wind farm. The project is a perfect fit for our core expertise and strengthens our cooperation as a provider of wind power services," says Pekka Pitkämö, Vice President of Sales in Enersense's Renewable Energy segment.

"The Korpilevonmäki wind farm is a very important project for Ilmatar and increases the generation of renewable energy in Finland. While the construction schedule is tight and the market situation is challenging, Enersense's extensive experience in infrastructure construction in wind power projects convinced us. The construction of the wind farm will start immediately, and we look forward to working with Enersense," says Antti Lehtinen, Director of Procurement at Ilmatar.

Ilmatar is a Nordic energy company and an independent power producer that focuses exclusively on renewable energy. It operates in the development, construction, ownership and maintenance of renewable energy, especially wind and solar power projects. The total output of Ilmatar's onshore and offshore wind power and solar power projects that are at different stages in the Nordic countries is more than 20 GW. During 2023, Ilmatar will commission six onshore wind farms and one solar power farm in Finland.
