

## Enersense's cooperation with OX2 in wind farm maintenance continues

Enersense International Plc  
Press release 20 May 2024 at 12.40 p.m.

The Power business area of Enersense, a provider of zero-emission energy solutions, and OX2, a developer, seller and manager of wind and solar farms, have entered into an agreement on the maintenance of substations, internal networks and power lines at the Lestijärvi wind farm. Lestijärvi is the largest wind farm in Finland, with the output of its 69 turbines totalling more than 455 MW.

The servicing and maintenance of wind farm electricity networks comprise a key competence area for Enersense in the renewable energy sector alongside design and construction.

“Enersense has already before partnered with OX2 in wind farm maintenance. Being selected to extend our partnership is a strong indication of trust in Enersense's expertise and the aim of both parties to safeguard sustainable and reliable energy generation in Finland. This agreement strengthens Enersense's position as the largest maintainer of wind farms in Finland,” says Antti Toppinen, Sales Manager at Enersense.
