

Enersense to participate in an international centre of excellence and operations for offshore wind power that the City of Pori is building

Enersense International Oyj
Press release 20 June at 06:00 a.m.

Enersense, a creator of zero emission energy solutions, is participating in a center of excellence and operations that the City of Pori is building around offshore wind power. In addition to the city and harbour of Pori as well as Suisto Kiinteistöt, which is owned by the city, also Suomen Hyötytuuli, Enersense and Dutch Olmar, that provides logistical services to the harbour, have representation in the steering group of the project. The aim is that the centre of excellence will also employ international wind power technology and service providers.

“The Bothnian Sea is also in international considerations one of the most suitable areas for wind power turbines: within a radius of 400 km from Pori altogether 15 larger wind power projects have been published in Finland and Sweden. The centre of excellence will support Enersense’s growth ambitions and enables an improved role for Enersense as an EPCI supplier. Enersense’s wind power expertise and our 50,000 m² production facilities in Mäntyluoto, Pori, have a significant role in building up the centre of excellence, and we believe that the cooperation between the different operators will gather substantial synergies”, says Jaakko Leivo, EVP, Smart Industry.
