

Press release 2008-11-19

## Strategic orders of the C-RAD Sentinel system

**C-RAD AB with its three fully owned subsidiaries is all active in the field of radiation therapy. A new and improved version with new functionalities of the C-RAD Sentinel system was during Q3 released. In November important orders of the new system were booked.**

The Sentinel hardware has been further developed in order to increase the quality, improve the service friendliness and to lower the manufacturing cost. The manufacturing process has been streamlined and been moved to a subcontractor with a long experience of medical device manufacturing. Deliveries of the new system have started. The improved system has been well received by the market.

Uppsala University Hospital ordered their third Sentinel laser scanner system in the beginning of November. This system will be installed and integrated with an accelerator system delivered by the Swedish company Elekta. The delivery will include complete new functionality for advanced respiratory gated treatments. The Sentinel system will communicate with the CT- scanner at the clinic, its treatment planning system and the linear accelerator to control the respiratory gated procedure.

C-RAD is developing and manufacturing a private label version of the laser scanning system for the German company LAP. LAP is the leading company worldwide in the field of alignment lasers for use in radiation therapy. LAP is also developing and selling advanced laser systems to the European Airbus Group. Three orders were booked for the LAP version called Galaxy. More orders are expected.

Erik Hedlund, CEO, C-RAD AB:

"We are very pleased with the new bookings for the Sentinel system. The order to Uppsala University Hospital including complete new functionality for so called respiratory gating will be challenging for the employees of the C-RAD group. The system will be developed in close cooperation with Uppsala University Hospital and Elekta.

The close cooperation with the German company LAP has improved the performance of the Sentinel and the Galaxy solutions. LAP has in 2008 increased its efforts to sell the system. Galaxy has been presented at all major international events. In order to satisfy the demand 3 orders of the Galaxy system was placed.
