

Net Insight Expands Nimbra 600 Series with Introduction of Nimbra 640 Media Access Gateway

New media gateway offers perfect solution for remote production and live event contribution

STOCKHOLM, Sweden – Net Insight, a leading provider of efficient and scalable transport solutions for media, IP and broadcast networks, announces today at IBC 2012 the expansion of its Nimbra 600 series of MSR's with the introduction of the Nimbra 640, a cost efficient and scalable media access gateway for media transport over IP networks.

Net Insight's latest addition to its Nimbra 600 platform offers unique mechanisms for Quality of Service (QoS) of bi-directional video and Ethernet transport. This coupled with integrated support for high quality, low-latency JPEG2000 video compression, makes it the perfect solution for live event contribution and remote production. Other applications for the Nimbra 640 Media Access gateway includes primary DTT-distribution, IPTV/Cable TV distribution and studio interconnect.

Per Lindgren, VP Business Development and co-founder of Net Insight said, "Introducing the Nimbra 640 to our established range of Nimbra MSR's is great news for operators and broadcasters that really want to simplify live event contribution and remote production." He adds, "The Nimbra 640 brings Net Insight's full MSR functionality into a cost-effective and compact access product."

The Nimbra 640 is built on the proven and much appreciated Nimbra 600 platform for QoS enhanced media transport. It offers features unique to Nimbra MSR's, including lossless routing, QoS enhanced links and service-centric network management, and is Net insight's first Nimbra 600 based gateway specifically designed for access applications.
