

Strong growth for cool roof paint containing Quartzene® – French customer places regular orders

Svenska Aerogel is once again sending an order – this time for 720 kg of Quartzene® – to its returning French customer Renovcoat. Renovcoat sells cool roof paint containing Quartzene® in the French and African markets. The company is now gaining market share in France, and the number of installed square meters is steadily increasing.

Svenska Aerogel now delivers Quartzene® to Renovcoat on a regular basis. Renovcoat uses the material for reflection and insulation in its cool roof paint, as Quartzene® offers excellent insulating properties and a high SRI (solar reflectance index). Renovcoat has applied Rooflect Therm, their cool roof paint containing Quartzene®, to several tens of thousands square meters of roofs. These roofs belong to various types of buildings, ranging from industrial facilities to school buildings. Additionally, Renovcoat is currently exploring new applications for the material, which shows that the company sees great potential in Quartzene®.

Joakim Wanner, Sales Director at Svenska Aerogel:

”We have a very successful collaboration with this customer, who is achieving great success in the French market. The interest in cool roof solutions is likely to remain high, given the high temperatures observed in Southern European countries in recent years.”

More information about Renovcoat’s cool roof paint can be found [here](#). The images below show the paint applied to different types of roofs.

What are cool roof solutions?

Cool roof coatings and paints can be applied on roofs to reflect sunrays and reduce the heat absorbed by the buildings. In warm countries, this can reduce energy use due to reduced space conditioning, which in turn lowers the energy costs. Cool roof solutions contribute to healthier indoor environments for people, animals, and food. Read more about cool roof solutions on Svenska Aerogel's [website](#).
