

## **CombiGene has today launched its new website [www.combigene.com](http://www.combigene.com)**

The new website has been developed to give our shareholders and current and potential partners a simple way of finding information about our operations, as well as present CombiGene as a gene therapy company at the cutting edge of research in a clearer way.

### **CombiGene AB (publ)**

Jan Nilsson, VD

By combining modern neuroscience with recent advances in gene delivery, CombiGene has developed a method shown to suppress epileptic seizures in preclinical studies. The current focus is on continuing to develop this method into an effective and safe therapy for epilepsy patients, but the method may also have development potential as a means of treating other neurological disorders.

Founded on the basis of scientific discoveries made at Lund University and the University of Copenhagen, CombiGene has offices at Medicin Village in Lund, Sweden. The company is public and listed on the Swedish marketplace AktieTorget. [www.combigene.com](http://www.combigene.com)
