Precise BioMatch™ Mobile deployed in Huawei Honor 10, integrated with under-glass sensor

Precise Biometrics' software for fingerprint recognition in mobile devices, Precise BioMatch™ Mobile is deployed in Huawei Honor 10, integrated in a Qualcomm® Fingerprint Sensor for Glass from Qualcomm Technologies, Inc., a subsidiary of Qualcomm Incorporated. Precise Biometrics projects the integration will generate royalty revenue from the second quarter of 2018 and will be based on actual sales of fingerprint sensors that utilize Precise BioMatch Mobile.

"We are pleased to provide Precise BioMatch Mobile to Huawei Honor 10 and supporting Qualcomm Technologies with the first commercial implementation of their new generation ultrasonic fingerprint solutions", said Torgny Hellström, Executive Chairman of the Board of Directors at Precise Biometrics.

"The design of mobile phones in the higher price segments is increasingly moving towards displays that cover the entire front side. This is an important first step in commercializing our products for under display fingerprint solutions", said Torgny Hellström.

For this deployment, Precise BioMatch Mobile has been integrated with Qualcomm Fingerprint Sensor under Glass. Honor 10 was launched today and is Huawei's latest phone in the Honor series. For more information and availability, visit <https://consumer.huawei.com/en/>.

Qualcomm Fingerprint Sensors were designed to support sleeker handset designs for mobile phones, while being able to scan through up to 800um of cover glass, a common thickness for displays. As well, they offer the added value of enhanced mobile security authentication.
