

Precise Biometrics releases Tactivo™ solution for Android

Global launch of Tactivo mini for Android.

With this launch, Precise Biometrics expands its offering outside the existing iOS based product range. The new Tactivo supports Android and further along even other mobile operating systems to ensure that Precise Biometrics are able to cover most of the Smartphones and Tablets in use by their Government and Enterprise customers. A complementary mobile toolkit for Android is also available to app developers.

Thomas Marschall, President and CEO of Precise Biometrics, says: "We are very excited about our launch of Android products. We have, during the spring, gained a lot of positive feedback from selected partners that had availability to prototypes and the toolkit. This launch will allow us to increase our market potential as we now cover more than 90% of the Smartphones and Tablets in our focus segments."

Tactivo mini is also available in an iOS version, based on the new Apple Lightning connector. Tactivo mini for iOS is MFi certified by Apple.

For more information about Tactivo mini and Precise Mobile toolkit for Android refer to the Products section at www.precisebiometrics.com.
