

Another pilot order for Svenska Aerogel – Quartzene® to be tested in unique insulation technology

Svenska Aerogel has received another significant pilot order. This time, the order for approximately 160 kg of Quartzene® has been placed by a new customer in the process industry through Svenska Aerogel's Dutch distributor, Vesta Chemicals. The material will be used in a unique technology for thermal insulation that is currently being developed by the customer. Lately, Svenska Aerogel has noticed rapid development in several customer projects. This collaboration is an example of such progress, where another customer enters the pilot phase of their product development.

Earlier this month, [Svenska Aerogel announced receiving a pilot order for 560 kg of Quartzene®](#). Both this and the recently received order exceed the typical size for a pilot order at Svenska Aerogel, which usually ranges between 50-150 kg.

The next step is the pilot run with the ordered material. "A significant step forward is that we have now reached the pilot phase thanks to the solid, long-term collaboration with the parties involved. We are confident that the customers who are now entering the pilot phase will be successful in their product development and create increasing volumes for us," says Tor Einar Norbakk, CEO of Svenska Aerogel.

"While we categorize this customer in the process industry, it is clear that its product will have a wide range of applications across various industries. It is a versatile and exciting technology for thermal insulation. We are happy to see how Quartzene® can enhance both new innovations and existing solutions in thermal insulation," says Tor Einar Norbakk.
