

EMC testing at an external company in Germany

Yesterday, EMC testing (electromagnetic compatibility testing) of Lumito's product, SCIZYS, began with an external independent testing company in Germany to obtain an external assessment that ensures the product meets all relevant requirements.

The company has prepared well with Optronic Partner pr for the independent EMC test and is now ready. The EMC testing is a step on the way towards a CE-marked product and then a subsequent launch. Lumito wants to be safe and secure that the product meets all relevant requirements. Tests and reviews of design documentation take place over several weeks and will be finalized with a written report from the testing company.

I am proud and pleased that we are now entering this phase, which is an essential step towards CE marking and our planned launch, comments CEO Mattias Lundin.

www.lumito.se/en

Lumito specializes in medical technology for digital pathology. Through its proprietary and patented technology, Lumito aims to provide healthcare providers with a powerful tool to meet the demands for fast and safe tissue diagnostics in personalized healthcare. The technology enables higher-contrast images without irrelevant background information, making it easier for pathologists to find cancer indications. The technology, based on Up Converting NanoParticles (UCNP), has the potential to significantly improve the diagnosis of tissue samples through higher quality analyses and shortened analysis times. The method has several potential applications, but Lumito has focused primarily on digital pathology and first on a release of SCIZYS by Lumito for use in research laboratories. The company is a spin-off of a research group at the Department of Atomic Physics and Laser Centre. www.lumito.se/en

The share is traded on NGM Nordic SME under the name LUMITO. Mangold Fondkommission AB is Lumito's Mentor.
