About Oncopeptides

Oncopeptides is a research and development stage pharmaceutical company developing drugs for the treatment of cancer. Since the founding of the company, the focus has primarily been on the development of the lead product candidate Ygalo[®], an innovative, peptidase-potentiated alkylator intended for effective and focused treatment of hematological cancers, and in particular multiple myeloma. The current clinical study program of Ygalo[®] is intended to demonstrate better results from treatment with Ygalo[®] compared to established alternative drugs for patients with late-stage multiple myeloma. Ygalo[®] could potentially provide physicians with a new treatment option for patients suffering from this serious disease.
