### About Sedana Medical

Sedana Medical AB (publ) has developed and sells the medical device AnaConDa, for the administration of volatile anaesthetics to mechanically ventilated patients. A major pivotal study is currently ongoing to obtain market approval in Europe for inhaled sedation in intensive care units with the pharmaceutical IsoConDa® (isoflurane). The company expects the registration of IsoConDa in Europe to take place during the second half of 2021. Three years thereafter Sedana Medical expects sales of SEK 500 million in Europe and an EBITDA margin of about 40 percent.

The market for Sedana Medical's sedation therapy of AnaConDa and IsoConDa consists primarily of sedation of mechanically ventilated intensive care patients. Today, these patients are sedated intravenously which leads to several challenges for both patients and care givers. Challenges that are solved by inhaled sedation. Based on an estimate of seven to eight million patients being sedated in intensive care due to mechanical ventilation globally, on average three to four days, Sedana Medical estimates the total market potential to SEK 20-30 billion, evenly distributed between the US, Europe and Asia. The company has initiated a process to obtain market approval in the US in 2024. Registration activities are also initiated in other markets outside the EU.

Sedana Medical has direct sales in the Nordic countries, Germany, Benelux, France, Great Britain and Spain as well as external distributors in parts of the rest of Europe, Australia, Canada, China, India, Israel, Japan, Mexico and South Korea. The company was founded in 2005 and is headquartered in Stockholm, Sweden, with medical device development in Ireland.
