## **KEBNI RECEIVES FIRST ORDER FOR FUTURE IMU SENSOR PLATFORM AHEAD OF RELEASE**

### **KebNi AB (publ) receives first order for its coming inertial sensing product family SensAltion ahead of official release**

**Stockholm, 29 November 2021** – KebNi today announces the first order for an IMU (Inertial Sensing Unit) of the coming multisensor platform SensAltion, ahead of both official product release and prototype availability.

The client, Nasdaq First North-listed SeaTwirl AB (publ), develops innovative offshore wind energy solutions. The SensAltion sensor unit will be used operationally for various purposes, including emergency shutdown activation. Specifically, SensAltion will sense, compute, and monitor the heave motion (simply put the wave height) and send criteria-based alarm signal for immediate wind turbine shutdown at rough sea state.

SeaTwirl CTO Jonas Boström comments: *"We are delighted to work with KebNi and look forward to integrate their sensor platform into our system. The feedback from my team is that KebNi increases the reliability, reduces complexity and cost on our end."*

The robust and highly ruggedized SensAltion platform is suitable for use in tough conditions. Combining that with its heave functionality makes SensAltion applicable for a range of maritime applications and industries including offshore energy, shipping, hydrography, and other naval purposes. Understanding of SeaTwirl's needs enabled KebNi to provide additional value by developing a custom alarm feature.

*"I'm thrilled to see clients ordering SensAltion already before prototypes are available, that certainly verifies the concept. Based on this small first order, we look forward to deepening the new and exciting collaboration with SeaTwirl. This order also brings KebNi into the growing renewable energy market and shows our ability to turn the sensor platform into tailored solutions that solve safety critical end-user needs."* says Erik Winther, Head of Inertial Sensing Sales.

#### **About KebNi AB**

*KebNi has a long history and extensive experience in maritime and land-based satellite antenna solutions as well as solutions for inertial sensor systems for motion detection. The company, headquartered in Stockholm, is focused on becoming a leading supplier of reliable technology, products and solutions for satellite communications, security, positioning and stabilization. KebNi's products and solutions are aimed at government, military and commercial customers. The company operates in a global market, directly and through a network of resellers.*

*KebNi currently has operations in two different product areas - satellite communication and inertial sensors. These are described in detail at [www.kebni.com](http://www.kebni.com).*

*KebNi "brings stability to a world in motion".*

*The company's share (KEBNI B) is traded on the Nasdaq First North Growth Market. Certified Adviser is G&W Fondkommission, e-mail: [ca@gwkapital.se](mailto:ca@gwkapital.se), telephone: 08-503 000 50.*
