

New order for Svenska Aerogel

- Quartzene in thermal-insulating coatings for energy savings

Svenska Aerogel has received a small order for Quartzene from the French distributor Novcoat. Quartzene is a crucial addition in "Cool roof" products for energy savings on horizontal roofs.

The manufacturer is a French company specializing in industrial paint and coating solutions. Their "Cool roof" product with Quartzene responds directly to the increased demands of the French government that impose stricter rules for energy-saving measures on buildings with flat roofs. The manufacturer also uses Quartzene for the development of so-called "Safe touch" products that are applied to hot tubes in industries and tight machine spaces etc.

- We have a good cooperation with Novcoat and we are pleased to see that manufacturers in this network now are making progress. These products are important energy-saving solutions that we will surely see more of in the future. Tor Einar Norbakk, CEO of Svenska Aerogel.
