

New factory with higher capacity

- Svenska Aerogel Holding AB (publ) delivers first order from new production line

The investment in the new production line "MPP 2019" gives Svenska Aerogel access to significantly larger deals. The first order is delivered.

"It is great to end a very intense period with this first order from our new production line. The tests are approved, and we continue with adjustments and evaluations to further optimize the plant. The aim is to continue the development of the factory in Gävle, where MPP 2019 is the first of four planned manufacturing modules.

The MPP 2019 project has given us important experiences and knowledge that significantly will shorten the time for further developments", explains Nestor Wallberg production manager at Svenska Aerogel

Operator Joel Svedberg filling big bags with Quartzene.

The first order to be delivered from MPP 2019 goes to Barozzi Vernici, Italy, who uses Svenska Aerogel's product Quartzene for the manufacture of thermal insulating plaster. The Thermo-Line @ product won an innovation competition in the Netherlands earlier this year aiming for innovative, energy-efficient solutions for real estate. Svenska Aerogel, Barozzi Vernici and Svenska Aerogel's reseller in the Netherlands Vesta Chemicals were part of the winning team.
