

TagMaster receives 3 new orders within Rail Solutions

Press release, Stockholm, Sweden 21 December 2016

TagMaster, the leading supplier of advanced RFID products and ANPR cameras for vehicle identification in Traffic Solutions and Rail Solutions has, directly and through its recently acquired daughter company Balogh SA, received orders for 3 new rail projects at a total value of around 1M€.

The orders comprises products used for ATP (Automatic Train Protection), i. e. equipment used to avoid collision caused by excessive speed or missed signal information, and products for positioning of metro trains. The customers are existing clients, big European actors in signaling systems and one Asian actor.

These products are part of the standard assortment within TagMaster & Balogh, but as often are adapted (NRE) for different projects and different customers. The total order value is around 1 M€ and deliveries will take place during 2017.

"TagMaster has earlier expressed its enthusiasm for the Balogh acquisition and this new orders show that our ambition, that together with Balogh become a stronger supplier within Rail Solutions, is justified. We together get a wider product offering and we could together become one of the leading actors in train signaling and we will be able to take on bigger and more projects" says Jonas Svensson, CEO, TagMaster.
