TagMaster owned Balogh receives order from China & France

Press release Stockholm, Sweden, May 23, 2017

TagMaster, the leading supplier of advanced RFID products and ANPR cameras for vehicle identification and Rail solutions has, through its subsidiary Balogh SA, received orders from China & France for tramway project in China and for commuterline project in France .

Balogh is one of the real pioneers in the RFID technology and was founded in 1958. Balogh today has offices for development and production in Paris, in Toulouse and in Normandie and works within the three RFID segments Rail, Access/Security (Traffic) and Industrial automation.

The order comprises products used for ATP (Automatic Train Protection), i. e. equipment used to avoid collision caused by excessive speed or missed signal information and for train positioning.

These products are part of the Balogh standard assortment but as often are adapted (NRE) for different projects and different customers and the order shows that Balogh has a strong product family among a number of rail applications.

"TagMaster has earlier expressed its enthusiasm for the Balogh acquisition and this order verify that our ambition, that together with Balogh become a stronger supplier within Rail solutions, is justified. We together get a wider product offering and we could together become one of the leading actors in train signaling and we will be able to take on bigger and more projects" says Jonas Svensson, CEO, TagMaster.
