## Traffic flow and Parking access control simplified by use of TagMaster ANPR cameras in 30 Norwegian airports

Press release, Stockholm, October 10, 2018

**TagMaster, leading supplier of advanced sensor systems for Smart Cities, has delivered their CitySync ANPR cameras for use in 30 airports in Norway in cooperation with APCOA Parking Norway. Totally 400 ANPR cameras has been deployed in order to facilitate entry and exit of numerous parking facilities at the airports.**

The cameras were installed as part of the APCOA CPMS (Car Park Management System) which is using ANPR cameras to identify vehicles entering and exiting the car parking facilities at the airports.

The goal with the project is to digitalize the traffic flow and parking at the airports. There are high demands on system functionality, as many of the airports are located at the coastline of Norway, with rough weather conditions and the North Sea almost hitting the runways. Projects cater for multifaceted solutions, with many different car parks used for several purposes and intricate demands.

“We are proud of having been chosen by APCOA as supplier for this new and exciting installation of our CitySync ANPR cameras. The use of ANPR technology for vehicle identification provides new and interesting features for the parking industry and we are happy to be part of this large and complex project”, says Jonas Svensson, CEO, TagMaster.
