## **SOUTHERN EUROPEAN AUTOMOTIVE COMPONENT SUPPLIER ORDERS COATING SYSTEM FOR RADOMES FROM IMPACT COATINGS**

Impact Coatings has received an order for an INLINECOATER™ system for coating radomes (radar emblems) used for automotive safety systems. The customer is a Southern European component supplier to the automotive industry. The order value is EUR 710,000 and delivery is planned for the third quarter of 2020.

The term “radome” refers to radar-transparent antenna covers. Today’s new cars use radar in safety systems that support the driver (advanced driver-assistance systems – ADAS). An automotive radar is often placed behind the front brand emblem, in bumpers, or integrated into side view mirrors or other plastic parts. A radome in the form of a radar-transparent emblem allows signal to pass through the emblem with low attenuation.
