

Svenska Aerogel delivers 2.6 tons of Quartzene® to a North American manufacturer in the outdoor industry

Svenska Aerogel is shipping its first major order of Quartzene® to a North American manufacturer of thermal insulation solutions for outdoor products. The delivery marks an important milestone in the ongoing collaboration between the two companies.

In connection with the customer's initial order of 2 tons of Quartzene®, the parties signed a Letter of Intent. In the meantime, the customer has increased the requested quantity in the original order to 2.6 tons. To be able to start the project without delay, the customer chose to have part of the order delivered by air already in May.

To enable an effective implementation of Quartzene® in large-scale production, the customer has made several operational decisions related to its various production units. The work carried out this spring reflects both the customer's ambition to build a long-term solution and Svenska Aerogel's commitment to supporting an efficient and scalable implementation.

Discussions around a future framework agreement have progressed throughout the process, with tariff-related issues having impacted the timeline. Finalization is expected once the remaining steps are completed.
