

TagMaster begins shipping new XT series UHF readers and ID-tags

Stockholm, Sweden, June 2010 – TagMaster, the leading producer of advanced RFID solutions for access control and rail applications began delivering the new XT series UHF readers to TagMaster partners in June. TagMaster first presented the XT series of readers and ID-tags at the Intertraffic exhibition in Amsterdam earlier this year. The new UHF products are compliant with the latest EPC Gen 2 specification. The XT reader family together with windshield mounted ID-tags is designed for typical installations in application areas such as Parking, Gated communities and Condominiums.

This new reader family and associated ID-tags extends the TagMaster product portfolio and fully supports the ISO 18000-6 type C standard, often referred to as EPC Gen 2. It provides automatic identification at up to 5 meters with a passive ID-tag. The XT series readers support both standard EPC Gen 2 tags as well as the TagMaster SecureMarkID solution, which ensures that each ID-tag mark is unique and prevents duplication of a tag identity. The XT series provides an ideal solution for Vehicle Access installations with a high volume of ID-tags.

The XT reader family is equipped with the same Linux operating system as the existing LR series readers from TagMaster, thus supporting the same well known software applications and software development kit available with the market leading LR series. These software applications will now be available in the XT series, providing an extensive set of functionality and interfaces, which makes integration to management systems and other equipment both quick and easy.

The XT readers and ID-tags will be a complement to the existing TagMaster product portfolio. The LR-series of readers using 2.45 GHz technology is well recognised as market leading RFID system with installations all over the world, in all climate conditions and working in all types of demanding applications. The XT series meet the high demands for reliability and functionality set up by TagMasters global network of partners. This new range of products provides added advantages made available due to the characteristics in the ISO standard.

About TagMaster

TagMaster is a Swedish technology company founded 1994 with headquarters in Kista (Stockholm), Sweden. TagMaster designs and markets advanced long-range radio frequency identification (RFID) systems and information services associated with automatic vehicle identification, rail bound transportation and people access, in order to increase efficiency, security, convenience and to decrease environmental impact. TagMaster exports mainly to Europe, Asia and North America via a global network of partners, systems integrators and distributors. TagMaster shares are traded on First North in Stockholm, Sweden. TagMasters Certified Adviser is Remium AB.
