Core drillings at Viscaria commences

Copperstone is pleased to inform that the core drilling campaign at Viscaria is about to commence. The Copperstone organisation has been increased by one field assistant.

The drillings will be operated by Kati OY with a first stage of up to 8,000 metres, with the intention of increasing to 22,000 metres up and until December 2020. The drillings (VDD 0201 from hanging wall to footwall at the A-zone) will commence Tuesday, September 17, 2019. The first chemical results on the various elements in the shallow sulphide ore zone (A-zone) are expected during the second half of October and from there continuously during the campaign.

“We now have a solid platform, with a significantly strengthened financial position, contracted consultants, the necessary labour as well as working permits anchored by local interests. We are proud of working in harmony with the immediate area and with the greatest cost effectiveness. Next steps will include the recruitment of a Chief Geologist for Copperstone and a Study Manager for Viscaria,” comments Copperstone CEO Michael Mattsson.

The information was delivered by the above-mentioned contact for publishing September 16, 2019 at 16:15 CET.

For further information, please contact Michael Mattsson (CEO) at +46(0)580-88890, or michael.mattsson@copperstone.se or refer to Copperstone webpage: www.copperstone.se.
